

Covers.

With our new range of washable covers, you can adapt your new ECHT sofa to suit your wishes and requirements. In addition to a variety of colour options, you can also choose between recycled or recyclable fabrics, ensuring you will always find the right fabric for your story.

Fleece cover.

The fleece acts as protection for the cold foam. It regulates the moisture in the cover, allowing it to breathe. As a separating layer between the cover fabric and the seat construction, it provides a pleasantly soft contour and adds even more comfort.

Cold foam.

The foam consists of 100% polyurethane and was produced in line with BASF's biomass balance approach. It is a heavy, foamed cold foam that keeps its shape and easily moulds to the contours of the body. This means that the upholstery has an excellent pressure distribution and provides good support whether you are sitting, lounging or lying down.

Spring core cover.

Made from 100% recycled polyester, it acts as an additional layer over the spring core and protects the upholstery.

Bonell spring core.

This steel wire suspension ensures that weight is distributed evenly, supports the body's shape and contributes towards the sofa's stability and comfort.

Wood internal frame.

The frame is manufactured in our production plant in Pfalzgrafenweiler forms the structural basis. It supports the upholstery and contains mounting points for the legs.
