## PROFILE

### TECHNICAL DESIGN

- / Wooden inner frame
  - / Spring system: nosag spring
  - / Seat in polyurethane foam "density" 37 kg/m<sup>3</sup>, covered with a pad filled with foam fibre mix
  - / Back in polyurethane foam, "density" 30 kg/m<sup>3</sup>, covered with a pad filled with foam fibre mix
  - / Foot: steel single foot, powder coating jet black RAL 9005
- The data of "density" can vary in a range of +/- 10 %.

## LEG VERSIONS

Steel single foot,  
RAL 9005  
Jet black

## INFORMATION

- / Normal-depth models and over-depth models can be coupled together.
- / Ticking chamber webs in the pads can show through to the cover (= characteristic feature of high-grade upholstery pad workmanship).
- / The range is only suitable for velour covers to a limited extent. The fell seams and piping can lead to lines in the pile.
- / With modular systems, velour covers can lead to different pile alignments and therefore to different shine properties.
- / There are more dividing seams in leather covers than in fabric covers. Detailed information about this can be found in the Info section.
- / For ergonomic reasons, only the seat area of model ASS-PSZ – not the leg rest – is sprung. So if the leg rest is used as a seat it will feel much firmer.
- / Repeat and patterned fabrics cannot be processed with this range.
- / The cover material should be particularly soft and have a degree of thickness, due to the special corner stitching. Thin materials (especially fabrics) and materials that are strong along the fibre (leathers in particular) do not produce a harmonious overall appearance.

A high-quality, especially casual upholstery that forms waves/leaves indentations that are typical of the material. This waviness may even occur in new condition.
