

Design: freistil Design-Team

## PROFILE

## TECHNICAL DESIGN

- Wooden inner frame
  - Spring system: nosag spring
  - Seat in polyurethane foam, "density" 37 kg/m<sup>3</sup>
  - Back in polyurethane foam, "density" 28 kg/m<sup>3</sup>
  - Standard foot: tubular steel leg, RAL 9005 Jet black
- The data of "density" can vary in a range of +/- 10%.

## INFORMATION

- Choice of seat height 37, 40 or 43 cm. However seat height 43 cm is only possible with the tubular steel leg, tapered steel leg and tapered foot oak (even sloping conical bases). Please specify on ordering.
- The legs can be positioned either slightly inwards or directly at the corner in this range. If you would like them positioned slightly inwards, please specify this when placing your order.
- Normal-depth models and over-depth models can be coupled together.
- Models with different backrest heights cannot be linked together.
- A-PB 138 forms a formally closed daybed situation in the case of a corner between ASO 160 and ASO 180. Model cannot be linked, is only positioned alongside.
- Corner groups only of ASOs always consist of models with the same orientation: K-ASO left + K-ASO left, and K-ASO right + K-ASO right.
- RUK-RO is only suitable for the version with low back.
- With modular systems, velour covers can lead to different pile alignments and therefore to different shine properties.
- There are more dividing seams in leather covers than in fabric covers. Detailed information about this can be found in the Info section.
- In the case of groupings with different seat depths, their sitting comfort will change differently over time as a result of use: a narrower seat depth remains firmer; a wider seat depth becomes softer.
- Each leg on the side of the arm section can either be fixed externally or moved inside by approx. 22 cm. Cannot be applied to the XL-EPT, PB and A-PB.
