PROFILE

TECHNICAL DESIGN

- / Wooden inner frame
- / Spring system: nosag spring
- / Seat in polyurethane foam, "density" 37 kg/m³
- / Back in polyurethane foam, "density" 37 kg/m³
- The data of "density" can vary in a range of +/- 10 %

INFORMATION

- / **Choice of seat height 37, 40 or 43 cm. However seat height 43 cm is only possible with the solid steel leg, tubular steel leg and tapered foot oak (even sloping conical bases).**
- / The legs can be positioned either slightly inwards or directly at the corner in this range. If you would like them positioned slightly inwards, please specify this when placing your order.
- / Normal-depth models and over-depth models can be coupled together.
- / Corner groups only of ASOs always consist of models with the same orientation: K-ASO left + K-ASO left, and K-ASO right + K-ASO right.
- / There are more dividing seams in leather covers than in fabric covers. Detailed information about this can be found in the Info section.
- / For ergonomic reasons, only the seat area of model ASS-PSZ – not the leg rest – is sprung. So if the leg rest is used as a seat it will feel much firmer.
- / With velours covers, please note the following points:
 - If models are facing different directions (such as corner seating or a group of armchairs), the pile will lie in different directions. This means it will reflect the light differently and create a different colour impression.
 - Felled seams or piped seams will result in an alley-like appearance in the pile.
 - Shadow effects are created when the fabric is placed with the pile running in a different direction.
 - In the case of seams that run vertically, the fabric colour on one side of the seam may appear lighter than on the other.

High-quality, casual upholstery that forms waves/leaves indentations that are typical of the material.
